

AeroX

A MEME WITH A MISSION | Whitepaper Draft v0.2 | October 2026

Status: Draft for review. Token allocations, release schedule and liquidity provision described below are plans, not completed actions. This document does not represent approval by BscScan or any regulator.

1. Project overview

AeroX is an independently operated meme-token project on BNB Smart Chain, inspired by space exploration and community interest in the future of civilian space travel. AeroX is not presented as an investment in a space company and does not currently claim to finance or operate space missions.

2. Token information

Project: AeroX

Network: BNB Smart Chain (BSC)

Planned / stated total supply: 1,000,000,000 AEROX (subject to on-chain verification)

Contract address: 0x9d49a758fb788832Bf6f10503e4024ff03aDe29f

Website: <https://www.aero-x.space>

Telegram: https://t.me/AeroX_Space_Official

3. Planned token allocation and release

Allocation	AEROX	Share
Founder reserve	250,000,000	25%
Initial trading liquidity allocation	150,000,000	15%
Subsequent planned releases (12 x 50m)	600,000,000	60%
Total	1,000,000,000	100%

The schedule is intended to start on the first day of public trading on PancakeSwap (Day 0). The project plans an initial allocation of 150,000,000 AEROX to trading liquidity and subsequent releases of 50,000,000 AEROX per month for 12 months. Release does not necessarily mean sale or immediate circulation. The method and destination of each release will be disclosed before implementation.

No community reward program, airdrop or giveaway allocation is planned under this model. All tokens are currently reported by the founder as being held in a founder-controlled wallet; the allocation above has not yet been executed.

4. Founder holdings and transparency

AeroX is founded and managed by one individual using the public project name "AeroX Team". The founder plans to retain 250,000,000 AEROX (25% of total supply) and voluntarily refrain from selling these founder-reserve tokens for the first 12 months after the public trading launch. This is a stated

intention, not a smart-contract lock. The founder continues to control the tokens and can technically transfer them. Any change to this intention or any material founder sales should be publicly disclosed in advance.

5. Initial liquidity plan

The initial liquidity budget is approximately EUR 300 worth of BNB, paired with an amount of AEROX to be confirmed before pool creation. The proposed initial token allocation is 150,000,000 AEROX; actual pool quantities, initial pricing, LP ownership and any LP lock will be disclosed after execution. Thin liquidity can lead to extreme price movements, high slippage and difficulty selling tokens.

6. Roadmap

Completed / reported: Project website and official Telegram channel launched; token contract address identified.

Pending: Contract source-code verification and token-information review on BscScan, on-chain checks, launch-liquidity preparation and public trading launch.

Planned after launch: Monthly release disclosures and continued maintenance of public project information.

7. Risks and limitations

AEROX is a speculative meme token with no guaranteed utility, returns or liquidity. Holders may lose their entire investment. Smart-contract vulnerabilities, concentrated token ownership, volatility, liquidity withdrawal, regulatory changes and operational errors are material risks. No claim of guaranteed profits or affiliation with any aerospace organization is made. This draft is informational, not financial or legal advice.

8. Official communications

Website: <https://www.aero-x.space>

Telegram: https://t.me/AeroX_Space_Official

Contract: <https://bscscan.com/address/0x9d49a758fb788832Bf6f10503e4024ff03aDe29f>

Before public release, verify all supply and contract details on-chain, confirm the final pool parameters and review applicable legal disclosure requirements.
